

OK! Magazine features i-Lipo in June 24, 2013 issue

KHLOE'S SECRET LIPO

OK! BIG NEWS

DON'T TELL ANYONE, BUT THIS KARDASHIAN SISTER HAS SOME HELP LOOKING GREAT

Khloe Kardashian Odom is looking better than ever — and insiders tell OK! it's not only due to her new diet and exercise regime! The star has had a couple of procedures she prefers to keep under wraps, sources say.

Her favorite may be i-Lipo, a laser treatment that shrinks fat cells and promises to shape the body without pain or dieting.

"She has tried i-Lipo on her hips, legs and stomach," an insider says. "She's kind of obsessed because they say you can go down almost a jeans

size. She loved it."

According to the insider, Khloe also tried another similar treatment, the Zerona Laser, and even had some surgical liposuction when she was in for a nose job recently (surgeons built out the bridge).

Her major trouble zones? "She's got the same areas of concern as her sisters: thighs, stomach, legs," the insider continues.

"She doesn't want to be perfect," says the insider. "She just wants to wear her skinny jeans without feeling like she'd have to unbutton the top button after going for pizza."

What Is i-Lipo?

i-Lipo uses low-level laser technology to aid in fat reduction and body shaping by stimulating fat cells to shrink them, says Dr. Aaron Rollins, founder of the Elite Body Sculpture in Beverly Hills and Sacramento. It takes multiple sessions to see results, with each one costing \$300 and up!
